

## 7. PRAKRITI ASSESSMENT

### LEARNING OBJECTIVES

After completion of the practical, students should be able to:

Understand the concept of Prakriti and its significance in Ayurveda.

Learn the methods of assessing Prakriti through Darshan, Sparshan and Prashna.

Accurately determine the predominant dosha(s) in an individual.

### PRINCIPLE

Prakriti or an individual's constitution is determined by analyzing the dominant doshas - Vata, Pitta and Kapha. The assessment involves observation (Darshan), touch (Sparshan) and inquiry (Prashna) to evaluate physical, physiological and psychological traits.

### PURPOSE

To identify the Prakriti type of an individual for personalized health management.

To enhance diagnostic skills in Ayurveda for holistic care.

### INSTRUCTIONS

#### Instructions for Prakriti Assessment

1. **Prakriti Assessment Methods** Students must assess Prakriti using given Prakriti proforma.
2. **Dosha Characteristics** Each dosha (Vata, Pitta, Kapha) column contains 35 characteristic features.
3. **Student Responsibility:** Assess the characteristic features in the examinee and tick (✓) the respective column if the feature aligns with the examinee's traits.

4. **Guidelines for Marking;** Mark (✓) based on occurrence frequency:

- Rarely Occurs: Do not mark.
- Sometimes Occurs: Mark cautiously.
- Often Occurs: Confidently mark

Allocate 1 mark only when certain that the feature aligns often. Refer to provided clues under each point if needed.

5. **Dosha Characteristic Calculation:** Count the total number of features marked (✓) in each dosha column.

### PROCEDURE

1. Explain the process and objective of the assessment to the participant.
2. Record basic details such as name, age, gender and weight.
3. Conduct Darshan (visual examination): Observe anatomical traits like body build, height, skin texture, hair type etc.
4. Perform Sparshan (tactile examination): Assess skin temperature and texture, pulse, joint movements etc.
5. Use Prashna (inquiry) for physiological and psychological traits: Ask about sleep patterns, appetite, dreams, decision-making tendencies etc.
6. Tick characteristics observed under respective doshas in the Prakriti assessment form.
7. Calculate scores for Vata, Pitta and Kapha characteristics.

### PRECAUTIONS

Ensure accurate measurement of physical parameters. Avoid leading questions during inquiry.

Consider external factors (e.g., age, environmental conditions) affecting the participant's traits.

## INTERPRETATION OF RESULT

**Interpretation of Result Criteria:** The results of Prakriti Parikshana can be interpreted using two approaches:

### First Interpretation:

Example: Each dosha has a total of 35 features. If, out of 35 features, Vata has 20, Pitta has 10 and Kapha has 7 features marked, the Prakriti can be interpreted as:

Vata Pradhan Pittanubandhi Prakriti. This indicates that Vata is the predominant dosha with Pitta as a secondary influence.

### Second Interpretation:

**Ekdoshaja Prakriti:** If more than 75% (i.e., more than 26 out of 35) characteristics of a single dosha are marked, it signifies the predominance of that specific dosha.

**Dwidoshaja Prakriti:** If 40%-60% of the characteristics of two doshas are marked, it indicates the simultaneous balanced traits of two doshas.

**Sama Prakriti:** If 30%-35% of the characteristics of all three doshas are marked, it suggests an equal predominance trait of all three doshas.

Report the findings clearly in the Prakriti Examination Form, ensuring alignment with the observed characteristics

## SHLOKAS (VERSES) FOR RECITATION

## Psychological Traits

|    |                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |        |        |        |
|----|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|--------|--------|
| 19 | Indecisiveness | अनवस्थित आत्मा/अव्यवस्थितमति: (Indecisiveness often change in decisions)<br>After taking a decision how often you feel the need to change your decisions?                                                                                                                                                                                                                                                                                                                                                            | 1      | 0      | 0      |
| 20 | Comprehension  | श्रुतग्राही: (Quick comprehension/ Grasping)<br>चिरग्राही: (Delayed comprehension)<br>If the participant is able to grasp new information quickly, he/ she may be considered as Shrutagrahi. Else, if his/her grasping is delayed he/she may be considered as Chiragrahi. Tell a short story or passage and ask the person to summarize it. The participant who answers 60 % or above (able to answer 6 or more out of 10) correctly may be taken as Shrutagrahi.                                                    | 1<br>0 | 0<br>0 | 0<br>1 |
| 21 | Memory         | स्मृति मान: (Having good & long-term memory)<br>To assess good memory, ask the person to recall details of a meaningful past event, like a childhood story and evaluate their ability to retrieve vivid, accurate and sequential details. Alternatively, give them a list of 5 single words and 5 paired words to memorize. Test recall after 5 minutes for short-term memory and after 1-2 hours for long-term memory. If they recall 4-5 single words and 3 or more pairs, they likely have good long-term memory. | 0      | 0      | 1      |
|    |                | अल्प स्मृति/चल स्मृति: (Less memory/Unstable memory)                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 1      | 0      | 0      |
| 22 | Relationship   | मंद मित्र/अदृढ सौहृद/शीघ्र सौहृद: (Few friends/ Fickle friendship/ Make friends easily, quickly)                                                                                                                                                                                                                                                                                                                                                                                                                     | 1      | 0      | 0      |

|    |                     | <p>निपुण मति (Learning ability)/ मेधावी (Intelligent)</p> <p>A picture puzzle may be presented to a person to identify a set number of differences (e.g., 15 differences) between two otherwise similar images within 3 minutes. If the person successfully identifies 12–15 differences within the time limit, they may be considered to have good learning ability or intelligence. Total triangles are 27, squares are 40 and 5 differences.</p> <p>Alternatively, another task could involve asking the person to count the number of triangles/squares/ image in a given figure. This test can also assess learning ability and attention to detail.</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div> |   |   |   |
| 23 | <b>Intelligence</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0 | 1 | 0 |
| 24 | <b>Temperament</b>  | <p>क्रोधी/क्षिप्र कोप-क्षिप्र प्रसाद (Short tempered/ Becomes angry quickly &amp; gets pleased quickly)</p> <p>The assessor may ask the individual the following question: "What is your usual reaction if someone breaks a queue in front of you?"</p> <p>A. Ignore it, remain calm or politely request them to step back – overall calm demeanor.</p> <p>B. Start an argument, shout at them or lose your temper – overall short-tempered behaviour.</p> <p>C. Get angry or irritated quickly but calm down shortly afterward – overall volatile temper.</p> <p>(when an answer is B or C then score 1 for pitta)</p> <p>(when an answer is A then score 1 for Kapha)</p> <p>अल्प क्रोधः (Calm &amp; patient, Less anger)</p> <p>Ask the question - What is the opinion of your family members/friends/relatives about you? (calm, short tempered, get angry)</p>                                                         | 0 | 1 | 0 |

निपुण मति (Learning ability)/ मेधावी (Intelligent)

A picture puzzle may be presented to a person to identify a set number of differences (e.g., 15 differences) between two otherwise similar images within 3 minutes. If the person successfully identifies 12–15 differences within the time limit, they may be considered to have good learning ability or intelligence. Total triangles are 27, squares are 40 and 5 differences.

Alternatively, another task could involve asking the person to count the number of triangles/squares/ image in a given figure. This test can also assess learning ability and attention to detail.

23 Intelligence

0

1

0

क्रोधी/क्षिप्र कोप-क्षिप्र प्रसाद (Short tempered/ Becomes angry quickly & gets pleased quickly)

The assessor may ask the individual the following question: "What is your usual reaction if someone breaks a queue in front of you?"

A. Ignore it, remain calm or politely request them to step back – overall calm demeanor.

B. Start an argument, shout at them or lose your temper – overall short-tempered behaviour.

C. Get angry or irritated quickly but calm down shortly afterward – overall volatile temper.

(when an answer is B or C then score 1 for pitta)

(when an answer is A then score 1 for Kapha)

अल्प क्रोध: (Calm & patient, Less anger)

Ask the question - What is the opinion of your family members/friends/relatives about you? (calm, short tempered, get angry)
